

## Management of Constipation in Adults

### Definition

Constipation is defecation that is unsatisfactory because of infrequent stools, difficult stool passage, or seemingly incomplete defecation. Stools are often dry and hard, and may be abnormally large or abnormally small.

**Assessment** (see Flowchart on page 5 and <http://cks.nice.org.uk/constipation> )

- Clarify what the person understands by their constipation.
- Assess the presence and degree of faecal loading/impaction and faecal incontinence.
- Assess the severity and impact of the constipation and any faecal incontinence.
- Assess the role of predisposing factors (including drug treatment of co-morbidities – see *Table 1*).
- Identify any organic causes of constipation (see *Table 1*)
- Assess effectiveness of management to date.

**Be alert for any 'red flags' that might indicate a serious underlying condition.**

- **Persistent unexplained change in bowel habits?**
- **Palpable mass in the lower right abdomen or the pelvis?**
- **Persistent rectal bleeding without anal symptoms?**
- **Narrowing of stool calibre?**
- **Family history of colon cancer, or inflammatory bowel disease?**
- **Unexplained weight loss, iron deficiency anaemia, fever, or nocturnal symptoms?**
- **Severe, persistent constipation that is unresponsive to treatment?**

### Referral

- Refer for suspected cancer if 'red flags' are present (see [NICE CG27](#)).
- Consider surgical referral when there is pain and bleeding on defecation (e.g. from an anal fissure) that is severe or does not respond to treatment for constipation.
- Refer for assessment by a specialist with an interest in constipation when:
  - An underlying cause is suspected.
  - Treatment is unsuccessful.
  - Management may require further tests.
  - Assessment is required prior to referral for other interventions (such as psychology, psychiatry).
- Consider referral to a Continence Service (when available) if faecal incontinence is a problem.
- Consider dietetics referral for more detailed support of diet.

Table 1

Conditions which may cause or contribute to constipation	Commonly prescribed drugs which may cause constipation
<ul style="list-style-type: none"> <li>• Bowel obstruction</li> <li>• Irritable bowel syndrome</li> <li>• Cancer</li> <li>• Diverticular disease</li> <li>• Dehydration</li> <li>• Admission to hospital for any cause</li> <li>• Hypothyroidism</li> <li>• Neuromuscular disorders</li> <li>• Stimulant laxative abuse</li> <li>• Anorexia</li> <li>• Hypercalcaemia</li> <li>• Pregnancy</li> </ul>	<ul style="list-style-type: none"> <li>• Opioid analgesics, including compound products e.g. co-codamol, co-dydramol.</li> <li>• Drugs with antimuscarinic (anticholinergic) effects – Tricyclic/ SSRI/SNRI antidepressants; antipsychotics; antimuscarinic anti-parkinsonian drugs e.g. orphenadrine, benztropine, trihexyphenidyl, procyclidine; antihistamines – especially older sedating antihistamines e.g. chlorphenamine, promethazine and cyclizine; antispasmodics e.g. propantheline, hyoscine.</li> <li>• Calcium salts (note: contained in some antacids &amp; phosphate binders).</li> <li>• Aluminium salts (in many antacids).</li> <li>• Iron salts.</li> <li>• Calcium channel blockers (mainly verapamil).</li> <li>• Phenothiazines</li> <li>• NSAIDs (more commonly cause diarrhoea).</li>   <li>• 5HT<sub>3</sub> antagonists e.g. Ondansetron</li> </ul>

## RECOMMENDED TREATMENT OF CONSTIPATION IN ADULTS

For information on contraindications, cautions, drug interactions, and adverse effects, see the electronic Medicines Compendium (eMC) (<http://emc.medicines.org.uk>), or the British National Formulary (BNF) ([www.bnf.org](http://www.bnf.org)).

- **Assess patient, identify and manage any underlying cause** (see Table 1)
- **If faecal impaction** – see section on *Treatment of Faecal Impaction*
- **If opioid induced** – see section on *Prophylaxis and Treatment of Opioid Induced Constipation*
- **If IBS** – consider prescribing antispasmodic (mebeverine, alverine, or peppermint oil)  
<http://cks.nice.org.uk/irritable-bowel-syndrome>
- **Pregnancy and Breast-feeding:** Follow 1<sup>st</sup> and 2<sup>nd</sup> line treatment, as below, occasional use of glycerol or bisacodyl suppositories are also considered safe

### ALL PATIENTS : Lifestyle advice

- increase dietary fibre, ensure adequate fluid intake, exercise, advise on toileting routines

**When drug treatment is required a review after 1-2 weeks is necessary to assess response and modify drug treatment as required.**

### 1<sup>st</sup> line : BULK FORMING LAXATIVES

- **Ispaghula husk, 1 sachet twice daily.**

*Not suitable for chronic constipation (> 6 months duration), intestinal obstruction, reduced motility or where fluid intake is not adequate (e.g. debilitated or elderly patients)*

### 2<sup>nd</sup> line : OSMOTIC +/- STIMULANT LAXATIVE

- **Macrogols (e.g. Laxido, Movicol) 1 – 3 sachets daily in divided doses**  
**AND / OR**
- **Senna Tabs (=7.5mg sennosides / tablet) 2 - 4 tablets at night OR**  
**Bisacodyl Tabs, 5-10mg at night (increased if necessary to 20mg at night)**  
*Use where stools are soft but difficult to pass*

### 3<sup>rd</sup> line: REFER

*Where patient has failed to respond to the maximum tolerated dose of 1<sup>st</sup> and 2<sup>nd</sup> line treatments.*

Treatments suitable for prescribing by general practitioner, **following initiation or recommendation by specialist** include:

- **Prucalopride tabs 1 – 2mg daily**
  - as per [NICE TA 211](#) (for women only – following 6 months treatment of at least 2 classes of laxative at maximum tolerated doses, review after 4 weeks)
- **Linaclotide tabs 290 micrograms daily**
  - for IBS-C (constipation with pain symptoms)

Treatments to be prescribed by the specialist team include:

- **Lubiprostone caps 24 micrograms twice weekly for 2 weeks (Red drug – specialist only)**
  - As per [NICE TA 318](#) (following 6 months treatment with 2 different types of laxatives at highest possible recommended dose AND invasive treatment is being considered)

## Treatment of faecal impaction

### 1<sup>st</sup> line (Oral):

- **Macrogols** (e.g. *Laxido, Movicol*) **8 sachets daily in divided doses**

AND / OR

- **Senna Tabs (=7.5mg sennosides / tablet) 2 - 4 tablets at night**  
**Bisacodyl Tabs, 5-10mg at night (increased if necessary to 20mg at night)**  
*Use where stools are soft but difficult to pass*

### 2<sup>nd</sup> line (Suppositories)

- **Bisacodyl suppositories 10mg daily**  
*Use where stools are soft but difficult to pass*

AND/OR

- **Glycerol suppositories 4g daily**

### 3<sup>rd</sup> line (Micro-enemas):

**Docusate sodium micro-enema, STAT**

OR

**Sodium citrate micro-enema, STAT**

### 4<sup>th</sup> line

**Retention enemas**

**Sodium phosphate retention enema, STAT**

OR

**Arachis oil retention enema, STAT**

*For hard stools use at Arachis oil night + sodium phosphate retention enema or sodium citrate Micro-enema in morning*

## Prophylaxis and Treatment of Opioid Induced Constipation

### LIFESTYLE ADVICE

- increase dietary fibre, ensure adequate fluid intake, exercise, advise on toileting routines

### PRESCRIBE LAXATIVES FOR PROPHYLAXIS OF CONSTIPATION

- **Senna Tabs (=7.5mg sennosides / tablet) 2 - 4 tablets at night OR Bisacodyl Tabs, 5-10mg at night (increased if necessary to 20mg at night)**  
**AND**
- **Macrogols (e.g. Laxido, Movicol) 1 – 3 sachets daily in divided doses**

### TREATMENT

***When drug treatment is required a review after 1-2 weeks is necessary to assess response and modify drug treatment as required.***

- **If faecal impaction** – see section on *Treatment of Faecal Impaction*

- *Bulk laxatives not suitable*

### 1<sup>st</sup> line : STIMULANT LAXATIVE +/- OSMOTIC

- **Senna Tabs (=7.5mg sennosides / tablet) 2 - 4 tablets at night OR Bisacodyl Tabs, 5-10mg at night (increased if necessary to 20mg at night)**  
**AND**
- **Macrogols (e.g. Laxido, Movicol) 1 – 3 sachets daily in divided doses**

### 2<sup>nd</sup> line : ALTERNATIVE OR ADDITIONAL LAXATIVES

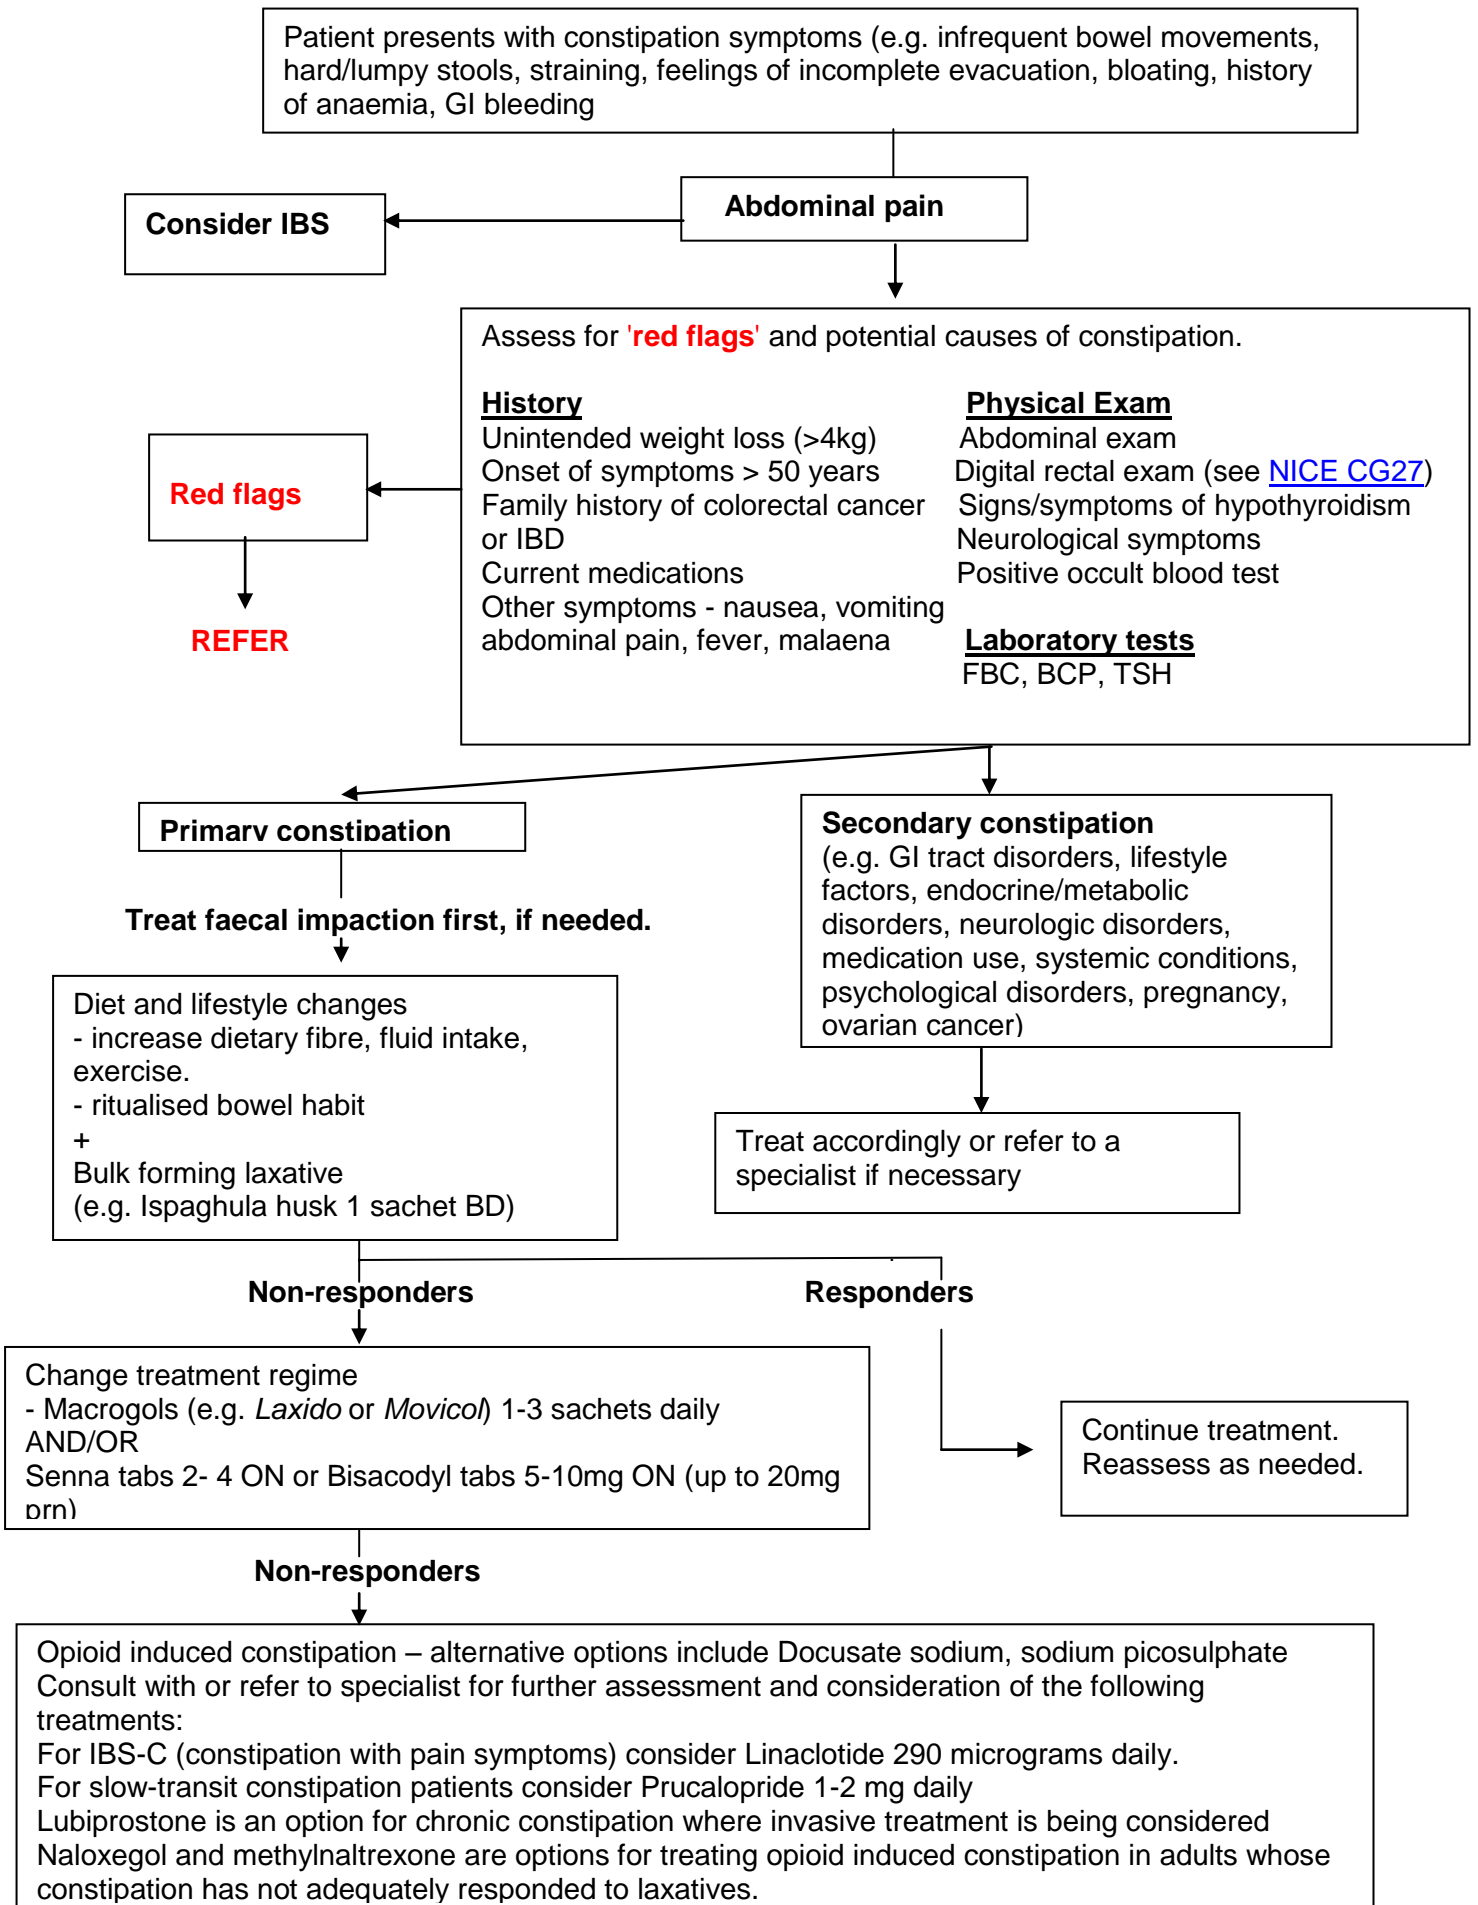

- **Docusate sodium** (alternative or additional stimulant with softener) **up to 500mg daily in divided doses**
- **Sodium picosulfate** (alternative stimulant) initially **5 – 10mg at night, increased to 15mg-30mg at night (split to BD dose in frail elderly patients)**

### 3rd line : REFER

#### On specialist prescriber advice only

- **Methylnaltrexone subcutaneous injection dose by weight, all once daily on alternate days** (2 consecutive doses can be given 24 hours apart if no response, frequency can be reduced depending on response) – up to 38kg: 150 micrograms per kg, 38-62kg: 8mg, 62-114kg: 12mg, 115kg and above: 150 micrograms per kg
- **Naloxegol tabs 25 mg daily** (initial dose 12.5mg daily in renal impairment, drug interactions)  
- as per [NICE TA 345](#) is an option for treating opioid induced constipation in palliative care in adults whose constipation has not adequately responded to laxatives.
